Overview

LexisNexis® Socioeconomic Health Attributes are designed to assist health care organizations with their risk analytics and predictive modeling activities by equipping them with insights into environmental, financial and other personal factors that influence an individual's behavior and affect his/her health outcomes. These insights provide health care organizations with the ability to identify and understand hidden patterns of risk and costs that cannot be uncovered with traditional health care data (e.g., medical and pharmacy claims, lab results, HRA, etc.). The result is that Socioeconomic Health Attributes can assist health care organizations in augmenting their existing predictive models to improve the accuracy of risk assessment of their members and create new models with enhanced data that can complement their current predictive models.

LexisNexis® Socioeconomic Health Attributes may be used for building or enhancing predictive health risk models and for patient or member care management. Socioeconomic Health Attributes may not be distributed to personnel within the Customer's organization for the purpose of profiling members for marketing, actuarial, underwriting individual insurance or health plan eligibility.

Reference Guide

This guide acts as a reference to Socioeconomic Health Attributes. The following pages contain a graphic representation of the attributes, which are organized into categories and grouped. Available attributes are listed in the order that they are returned in a response. For each attribute, the guide provides a definition, possible return values, and a description of each return value.

Null Values

What does it mean if an attribute returns a null value (a negative one, null, or blank)?

Any attribute may return no value. This can happen when:

- There was no information entered for a data input field. For example, if no address information was provided, the address-related attributes may return a null value because there was no information to process.
- There is no information available in our records. For example, if an address is in a new neighborhood, there may not be U.S. Census data available for the area. Therefore, some of the related address attributes may return a null value.

Due to the nature and the origin of public record information, the public records and commercially available data sources used in reports may contain errors.
